

Design Your Own PC

AP Computer Science Principles *Name*_____

Design your own custom computer using the [PCPartPicker website](#). PCPartPicker is very helpful as it won't let you choose incompatible parts. The following components will be required for your build:

- CPU
- Motherboard
- Memory
- Storage
- Case
- Power Supply
- Operating System

You are welcome to add any additional components to your build. When you are finished with your build, add copy the permalink under the current part list to the space below and submit your finished worksheet.
