

## **Instructions on how to use the Slide Show Star Interaction®.**

### **Why Slide Show?**

Slide Show allows a teacher to add images, SWF Animations, and FlashPaper to a slide show. Students can forward through the slideshow one slide at a time or set the show to auto play.

Each slide is accompanied by a caption. A personalized slide show caption and slide show title appear at the top of every slide.

**1**

### **Step One:**

On the next page, you can replace the default Slide Show title to one that best fits a general description of your slide show.

The default title is "My Slide Show".

This title will appear at the top of every slide.

## 2

### **Step Two:**

Turn to the next page.

#### **Don't delete this page.**

Simply replace the image by clicking on it and finding an image on your hard drive or following this procedure.

Find an image on the internet, right click on the image, and choose copy. This will copy the image to the computer's clipboard.

Then right-click on the existing image on the lodeStar page.

Choose Paste or Paste-Manual Crop. Experiment with the differences.

For a complete description of image handling, please consult the teacher's guide.

**3**

**Step Three:**

Repeat Step Two as often as necessary. Some computers will reach a practical limit of about 20 images. If you exceed 20 images you run the risk of taxing your computer's memory and, perhaps, boring your student.

**4**

**Step Four:**

When you have finished adding all of your images, click on the star button at the bottom right hand corner. A message will appear if you have successfully saved you file.
