

Math N06: Essential Mathematics Hands-On Activity

Title	Where is ???? in the Room?
Topic	Geometry
Introduction	This is a visual activity where students must visualize a shape and then identify it in the room. Students will learn to see how everyday objects are geometric and remember what they look like for the exam.
Materials	NONE, the room itself is the material
Time Required	< 15 minutes
Set Up	Stand in the room where you will state the shape(s)
Directions	<ul style="list-style-type: none"> • Say a shape and have the students point out things in the room that have that shape. • Say another one, and have the students point it out, and so on.
Follow Up/Discussion Questions	This activity should go quickly. The names of the shapes you say should be quick. Students will have to think quickly and point out the shapes quick.
Notes/Observations	<ul style="list-style-type: none"> • Try to encourage the students to look all around the room. You could even do examples outside the room. For example, what object in the world is shaped as a sphere? • Also, try to have the students who rarely participate take part by calling on them.
